safehosts

Colocation

Remove the cost and hassle of on-premise hosting while retaining complete control and ownership of your physical servers, with Colocation at our secure, privately-owned data centre.

Colocation is a cost-effective way of keeping control of your physical servers but without the time and cost outlay involved in maintaining an onsite server room.

Our high-specification, Cheltenham-based data centre is easily accessible from much of the UK, while our installation and management service makes setup and maintenance easy if you're based further afield.

› **Flexible plans, tailored to your specific needs**

› **Reduce the burden further with our managed service options**

› **Modern, efficient, low PuE data centre - ISO 9001/27001**

› **24/7/365 support and access**

How Colocation will benefit your business

Complete security for your hosted servers. Our 24/7 CCTV, manned security, perimeter fence and ISMS certified access control system combine to keep your servers safe around the clock.

Reduced infrastructure costs. Colocation removes cost-heavy demands such as cooling, ventilaton and risk suppression systems, freeing up finances for other projects.

Resilient, fully redundant data centre. From our carrier diverse core network to onsite power generation and multiple UPS, we give you optimal uptime for complete peace of mind.

Managed service options. Make Colocation even less of a strain on resources with our managed service; you simply provide the tin and we'll look after everything else.

Our difference

Since 2009, we've been providing safe, secure and accessible Colocation services from our private, Cheltenham-based data centre, helping both service providers and end users achieve increased security and cost savings for their hosted data and applications.

We're ISO 9001 and 27001 accredited, and have decades of combined hosting experience, helping us to meet all of your Colocation needs.

We're also flexible and easy to work with and we know that one size doesn't always fit all; we thrive on finding creative solutions to problems that other providers can't solve.
